CSCI351 Concepts of Programming Languages
Project 1

Part I:

Choose one of the listed programming languages and answer the below questions.

1. Python
2. C-sharp
3. Objective-C
4. Typescript
5. Dart

Questions (Note that plagiarism is not allowed and will result in a zero grade) (Do not copy paste from the Internet):

1. Explain the characteristics of the programming language you have chosen.
2. Where is this programming language used? (Give real world examples)
3. How does this programming language differ than other programming languages?
4. Answer the below and explain your answer
    a. By default, the language is statically typed or dynamically typed?
    b. Does the language support Object-Oriented Programming?
    c. Is it considered a High-Level Language?
    d. Is the language compiled or interpreted?

Part II:

Question 1: Write a complete Java program - with your own code writing - that contains:

1. A main method
2. A loop: for, while, or do-while
3. A selection: if-else or switch
4. Variables that have different scopes (main, loop, if, etc.)
5. A constant literal

Question 2: Test your program. Ensure that it runs correctly (syntax error free).

Question 3: Identify the scope(s) of each variable in your Java program.
